This study shows the dramatic recovery of a mature tree after significant hail storm damage.

Treatment

- Decompaction of soil at depths of 6" and 12"
- Injection of mycorrhizal fungi and triple 10 fertilizer at same depths

Equipment Used

- Model AL-147 Tree System
- Decompaction/Liquid Injection Tool with Standard 18" Lance (both included)

For more information or demonstration contact:

Before
10-20-2009

After
9-19-2010

"Within a year of the soil decompaction and root rejuvenation, our 18 year old feeble looking magnolia tree was noticeably fuller, greener and produced more flowers than it had in previous years. We wish we would have had these treatments available years ago."

This study shows the result after nearly one year of a single soil decompaction and root rejuvenation treatment on an 18 year old magnolia. The comments are from the happy home owners.

Treatment

- Decompaction of soil at depths of 6" and 12"
- Injection of mycorrhizal fungi and triple 10 fertilizer at same depths

Equipment Used

- Model AL-147 Tree System
- Decompaction/Liquid Injection Tool with Standard 18" Lance (both included)

For more information or demonstration contact:

These photos, taken the same day of similar ginkgo trees in close proximity to each other, illustrate the normal growth of the tree that received no treatment versus the accelerated growth of the tree that had been treated two months prior.

Treatment

- Decompaction of soil at depths of 6" and 12"
- Injection of mycorrhizal fungi and triple 10 fertilizer at same depths

Equipment Used

- Model AL-147 Tree System
- Decompaction/Liquid Injection Tool with Standard 18" Lance (both included)

With treatment
Decompaction/feeding with
Mycorrhizal and triple 10
